# Product Validity Validation Report _—EN 455-4 _—ASTM D7160 

No.: QCPG-81

Version: B/0

## Catalog

Part I: Product validity validation report scheme

Part II: Test Report

Part III: Conclusion

Part I: Product validity validation report scheme
1.0 Purpose

Guide experiments, to evaluate the shelf life of Disposable Nitrile Gloves
2.0 Time
2012.9.1 9: 00-2017.9.1 9: 00
3.0 Reference standard

ISO 188 rubber, vulcanized or thermoplastic - Accelerated Aging and thermal impedance testing

ISO 4684 rubber, vulcanized or thermoplastic - Determination of dimensions of test products and fragments

ISO 2859 sampling plan retrieval of acceptable quality level (AQL) sampling inspection

EN455-4:2009
EN455-1: 2000
EN455-2: 2015
ASTM D6319 :2001
ASTM D7160-2010
ASTM D412-98a
ASTM D 3767:2003(2014)
ASTM D 5151-06
<<Test Method For Nitrile Gloves>>
version No.: B / $0 \quad$ No.: QCPG-24
4.0 Tested by: Wang Yanxiang
5.0 Using instrument (with calibration report)

Tensile machine No.: FM06002
Thickness gauge No.: LG02004
Watertightness test equipment No.: FC01001
Steel ruler No.: LS01003

### 6.0 Test method

### 6.1 Sample selection

Randomly select 3 batches of gloves, and the production lot is:

|  | Size | Varieties | Lot No. | Time | Quantity <br> (pcs) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| The first <br> batch | S | Powder <br> free | 12090102 | $9: 00-9: 30$ | 3000 |
| The <br> second <br> batch | M | Powder <br> free | 12090103 | $9: 00-9: 30$ | 3000 |
| The third <br> batch | L | Powder <br> free | 12090107 | $9: 00-9: 30$ | 3000 |

### 6.2 Sample storage

It shall be packed in a box and placed in the sample room. The temperature of the sample room shall be above $25{ }^{\circ} \mathrm{C}$ and recorded.
6.3 Tensile test: according to en455-2:2015, ASTM D412

### 6.4 Watertightness test

According to en455-1:2000, ASTM D 5151-06

### 6.5 Test frequency

6.5.1 Comparison test: a set of values (not aged) shall be tested within 16-96 hours after the product is offline.
6.5.2 Test a set of values (accelerated aging) after $22 \pm 0.3$ hours at $100 \pm 2{ }^{\circ} \mathrm{C}$ 6.5.3 On September 1 of each year, according to EN455-1 / EN455-2, 13 samples are taken from each batch to test tensile forces, if the median value is more than 6 N , is qualified; 200 samples are taken from each batch to test pinholes and determine by the standard of AQL1.5. According to ASTM D515106, ASTM D6319: 2001, 32 samples are taken from each batch to test the tensile strength and elongation, determine by the standard of AQL4.0; 200 samples are taken from each batch to test pinholes and determine by the standard of AQL1.5
6.6 Result determination

Both of them meet the terms of EN455-4 and ASTM D7160, are deemed to be acceptable.

|  | Determine |  | Qualified | Qualified | Qualified |  |  |

Note: the tensile strength and elongation in the table are the lowest values of each group of monitoring data

## Part III: Conclusion

Conclusion: according to the analysis of experimental data, our company's nitrile gloves meet the requirements of EN455-4 and ASTM D7160 test standards, and the accelerated aging data is basically consistent with the data of gloves stored for five years, and within the scope of index control, the warranty period of nitrile gloves can be determined as five years. And the accelerated aging data of each batch can be used as the basis to determine whether the products meet the five-year shelf life.
